

Curriculum
The Art of Aligners
Dr. Mina Levi, DDS
Athens

November 29, 2024

Basics of treatment through aligners

- Anamnesis, photo documentation
- Intraoral scan of patients
- Prescription for a proper treatment plan:
 - Review the prepared treatment plan
 - Launching the case
 - Monitoring progress
 - Need for improvements
 - Finishing phase
 - Retention period
 - Checking the completed case

Biomechanics of aligners

- Discussing different treatment plans
- Types of attachments and their application
- Ways to achieve the required tipping, torque and rotation
- Intrusion
- Extrusion
- Movement of molars
- How to avoid an open bite with aligners
- Q&A with Dr. Levi.

Hands-on

- Scanning models with an intraoral scanner – how to achieve maximum accuracy in a short time.
 - How to reduce the probability of scanning error as much as possible?
- For Invisalign certified colleagues – discussing their patients' Clean check plans, eliminating mistakes and discussing different approaches.
 - For colleagues who are not Invisalign certified – discussion of photo documentation and preparation of a treatment plan.
